Absinthe, an intense alcoholic spirit favored by such artists as Degas, Van Gogh and Hemingway, is making a comeback in the United States after being banned by the government for almost 100 years. Its rebirth in trendy restaurants and bars is a triumph of marketing — and of maneuvering through a maze of federal rules on formulas and labels. It took a Swiss distiller, an importer and a Washington lawyer four years to navigate the bureaucracy, even after the drink was legalized again in much of Europe.

“This is a complex issue, and we are addressing it as best we can,” said Art Resnick, a spokesman for the Treasury Department’s Alcohol and Tobacco Tax and Trade Bureau, referring to the process that led this year to the agency approving four absinthe brands for sale in the United States.

For much of the 19th and early 20th centuries, the liquor, also known as the “green fairy,” was wildly popular among artists in Europe. It was featured in the Edgar Degas painting “L’Absinthe.” Emile Zola mentioned it in a novel, and Ernest Hemingway wrote: “Got tight last night on absinthe and did knife tricks.” Absinthe was believed to contain large concentrations of wormwood, a plant containing the chemical thujone, which could induce hallucinations and a druglike state. It was thought by many to be the source of Vincent Van Gogh’s impatience to cut off his ear.

Imports of absinthe were banned by the Department of Agriculture in 1912 because other countries had outlawed it. Later, a Food and Drug Administration rule demanding “thujone-free” products kept it off the market.

The whiff of illegality made absinthe all the more desirable. Groups like the Wormwood Society kept the mystique alive. It was bootlegged, sold widely over the Internet and smuggled into the country by travelers.

Once bans on the liquor were lifted in Europe in the 1990s, the campaign began in the United States to restore absinthe to the cocktail menu. To do so, however, the liquor would have to remain thujone-free — meaning it could not contain more than 10 parts per million.

The stakes were high for brand owners and importers. The winner would have a head start in the United States. It took a meeting in February between regulators and the trade counselor from the Swiss Embassy — to explain that his country had dropped objections to absinthe in 2004 — to restart the process.

Hurdles remained. When Kubler proposed listing 33.8 fluid ounces on its proposed bottle label, regulators rejected it, saying the proper designation was 33.82 ounces. In May, Kubler was told to “remove the boldness” of the text on back label labeling and use the same size print for all text shown,” according to one directive.

Approval for Swiss Absinthe Superieure, Kubler, 106 proof, was granted on May 17. Kubler’s success was diluted when a competitor, Lucid Absinthe Superieure, 124 proof, was in the stores the same month, after being approved in March.

Jared Gurfein attracted publicity for his Lucid brand when he abandoned a law career to start Viridian Spirits in Manhasset, N.Y., to make and distill absinthe. Gurfein also knew that “Kubler had hit a brick wall” with regulators, he said.

“We pushed the door down, and they walked through it,” Lehrman said, expressing frustration with the red tape he faced.

“In this instance, there was more than one reason to take a look at these labels,” said Resnick of the Tax and Trade Bureau. The office approved 125,000 labels for beer, wine and spirits last year. He wouldn’t elaborate on what those reasons were.

A Web site for the Drug Enforcement Administration’s Office of Diversion Control still lists absinthe under “drugs and chemicals of concern.” And the U.S. Customs Web site continues to list it as banned. A Customs spokeswoman said that while individual shipments are being approved for import, the agency is waiting for direction from the Tax and Trade Bureau.

In the meantime, the marketers have taken over.

“This is so easy,” said Lyons Brown, chief executive of Altamar Brands in Corona del Mar, Calif., distributor for Kubler, as the product was unveiled last week at Corio, a club in New York. “The key is to just get it into the market with all the theatrics that go with it.”
